SWITCH-Asia promotes sustainable housing and building

The building and construction sector accounts for 38% of the energy-related CO_2. *The 2020 Global Status Report for Buildings and Construction*, from the Global Alliance for Buildings and Construction (GlobalABC), found that while global building energy consumption remained steady year-on-year, energy-related CO_2 emissions increased to 9.95 $GtCO_2$ in 2019.

The EU funded SWITCH-Asia programme addresses the challenge. 15 grant projects across Asia apply different strategies to green the sector. A released video highlights how sustainable housing can improve the quality of your life.
